

ABSTRACT OF THE DISCLOSURE

A sundries caddy for use with cushioned furniture including an invertible receptacle support that carries a receptacle having an open end for releasably receiving sundries items therein. The receptacle support includes first and second members. In use, one of the first and second members is received by the cushioned furniture to define a captured portion of the receptacle support and the other of the first and second members defines a free portion of the receptacle support for carrying the receptacle. The caddy also includes structure for connecting the receptacle to the free portion whereby a user of the caddy can orient the open end of the receptacle upwardly regardless of whether the free portion extends upwardly or downwardly with respect to the captured portion.
